

ANTH 150: Human Origins

This course introduces students to biological anthropology and anthropological archaeology – those portions of the discipline concerned with human prehistory and continuing human development. The course examines reconstructions of the human record based on fossil and artifact-based evidence of human biological and cultural change over time. It considers various theories of human biological evolution and the emergence of culture – humanity’s unique ecological niche. The course examines the origins and development of world civilizations, and takes a critical look at theories that try to explain the development of social complexity.

Units: 3

Program: [Anthropology](#)
