

PSYCH 100: Introduction to Psychology

This course offers an overview of the principal perspectives and content areas in psychology and prepares students to take upper-level psychology classes. Students explore different research methods in psychology as well as the distinction between basic and applied research and how this distinction is manifested in present-day divisions of psychology. Topics may include social and developmental processes, neurobiology, personality, psychological disorders, sensation and perception, learning and memory, language, and applied areas.

Units: 3

Program: [Psychology](#)
